MLS® LASER THERAPY

*Decrease pain.
Increase mobility.
Speed recovery.*

What is Laser Therapy?

Laser Therapy is the use of specific wavelengths of light to treat painful and debilitating conditions.

How does it work?

Light energy enters the damaged cells and stimulates inter-cellular activity. This reduces pain in the area

and speeds recovery of the damaged cells. Once the cells recover, the healing process is complete.

What can I expect during a treatment?

MLS Laser Therapy is a painless treatment that takes an average of 8 minutes. You may experience a comfortable sensation at the point of application.

What can I expect after treatment?

Some conditions can see relief in as little as one visit. Most people experience positive results in 1 to 3 treatments, with the average course of treatment being 7 to 10 sessions.

Swelling is greatly reduced and there is a rapid relief of pain. Acute conditions usually subside quickly, typically within one phase of treatments, while chronic conditions can be controlled with regular treatments.

The effects of MLS Laser Therapy are cumulative; therefore, expect to see improvement as you proceed through your treatment plan. It is critical that once you start, you complete the course of treatments recommended by your doctor to be the most effective.

Relief

MLS Laser Therapy effectively treats:

- Tendon and ligament injuries
- Sore muscles, muscle strains and tears
- Neurological and general pain and bruising
- Musculoskeletal disorders
- Pre- and post-surgical treatment
- Anti-inflammation applications
- Specific neurological conditions

Benefits of MLS Laser Therapy:

- Rapid relief of pain
- Speeds healing process
- Non-surgical treatment
- Rapid repair of superficial injuries, such as wounds and ulcers
- No known negative side effects

Don't let pain slow you down!
